☎ (425) 551-0004

📍 Greater Seattle Area, WA

## CAREER OBJECTIVE

Proactive professional with 2+ years of experience and a proven knowledge of application development, programming, and web platform development. Aiming to leverage my skills to successfully fill the Software Engineer role at your company.

## EXPERIENCE

### Software Engineer

*Zulily, Seattle, WA / Aug 2018 - Nov 2020*

- Contributed to Vendor facing catalog app, working with React and Typescript on features related to image upload and validation, error handling, UI components, data management and custom middleware solutions.
- Worked closely with PM and Users to redesign Zulily's product copywriting tool, which included refactoring legacy React components and iterating on the filtering, sorting, and general user experience.
- Created the front-end data model and presentation layer with React and Redux for "Product Doctor", which has helped the merchandising department easily identify and address issues with bad quality products.
- Handling on-call rotations for our high-availability internal tools services consisting of front-end bug fixes, triaging, and cross-team collaboration.
- Contributed to the Bundle Builder project by fixing UI bugs and race conditions with data availability, as well as taking ownership of new features and finishing project development.
